Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Identification of a novel Drosophila melanogaster heat-shock gene,
"Identification of a novel Drosophila melanogaster heat-shock gene,
"Identification of a novel Drosophila melanogaster heat-shock gene,
GENE 171:163-170(1996)
-!- SUBCELLULAR LOCATION: CYTOPLASMIC (POTENTIAL)
-!- TISSUE SPECIFICITY IN EXPRESSED DURING EMBRYOGENESIS
WITH NO SIGN OF TISSUE SPECIFICITY IN EXPRESSION UP TO STAGE 17-
-!- DEVELOPMENTAL STAGE: DETECTED AT ALL DEVELOPMENTAL STAGES. THE
EXTREMELY HIGH LEVEL OF TRANSCRIPTION DETECTED IN THE EARLY EMBRYO
AND IN ADULTS IS CAUSED BY MATERNAL MESSAGE.
-!- INDUCTION: BY HEAT SHOCK.
-!- SIMILARITY: CONTAINS 6 WD REPEATS (TRP-ASP DOMAINS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15-JUL-1998 (REL. 36, CREATED)

Mean 26.978; Variance 38.734; scale 0.697 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

In the determination which domain structure of CNP was responsible in the determination which domain structure of CNP was responsible for the cyclic GMP producing activity characteristic of CNP, the peptides of R25948-56, R82970-31 and R29914-19 were synthesised. It was found that CNP derivs. exhibiting a stronger cyclic GMP producing activity than CNP-22 or alpha-hANP could be constructed by replacing part of the amino acid residues in CNP-22, CNP (6-22) and [Leulo, Lys11, Leul2] alpha-hANP(7-28) with unusual amino acid (non-native type) residues.

CNP derives that exhibit a strong cyclic GMP producing activity and cell growth suppressing activity against vascular smooth muscle cells are anticipated to be useful in therapeutics or preventives against diseases such as restenosis and arteriosclerosis. Among the derive

This represents a human alpha atrial natriuretic peptide sequence
field halpha. MANP). The invention provides a composition for treating cardiac
diseases associated with cardiac hypertrophy. The composition comprises
an active ingredient capable of binding to the peptide receptor of GG-A
and promoting production of CGMP. The drug composition may be used
clinically to treat cardiac diseases caused by cardiac hypertrophy,
including chronic heart failure, ischaemic cardiac diseases and
arrhythmia. The active substance can bind to the natriuretic peptide
receptor of GG-A and promote production of CGMP, effectively preventing
cardiac hypertrophy and leading to improvement of the pulmonary blood
circulation. The substance does not affect haemodynamic properties,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           28-OCT-1998 (first entry)
Alpha human atrial natriuretic peptide (alpha-hANP) 2 (residues 7-28).
ANP: atrial natriuretic peptide; cardiac disease; cardiac hypertrophy; chronic heart failure; iscinaemic cardiac disease; arrhythmia; cGMP: pulmonary blood circulation; haemodynamic property.
that contain unusual amino acid (non-native type) derivs. would probably exhibit resistance to proteases in the living body (in blood and on the surface of cells) upon admin. In vivo. Therefore, those derivs. even if they have a lower cyclic GMP producing activity than CNP-22 or alpha-hANP, would be characterised by a longer blood half-life than CNP analogs free from unusual amino acids, and, from this viewpoint, too, those derivs. are anticipated to have industrial
                                                                                                                                                     Cyclic GMP producing activity for CNP analog (26) is 255% increase for 1 microm, compared to 100% for alpha-hANP and 621% for CNP-22 (specific activity as compared to the activity of 1 microm alpha-hANP (2000 fmol/400000 cells), with max. activity being equiv. to the Sequence 22 AA;
                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PB1568 standard; protein; 22 AA. p81568 p91568. 10-00T-1990 (first entry) Atrial peptide analog with diuretic and natriuretic activities Atrial peptide analog; diuretic; natriuretic; hypotensive activity;

Atrial peptides.

Atrial peptides.

Atrial peptides.

Als at the 3 position is D-Als. Tyr22 has an NH2 group attached.

The peptide increases the cyclic GMP produced in assayed cells at considerable greater levels than Atriopeptin III and alpha-hANP, has a much greater hypotensive effect, and is a more potent diuretic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptide cod. - useful as natriuretic, diuretic and/or vasodilator in mammals
Disclosure; Column 52; 45pp; English.
The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluic volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The sequences given in R36937-78 are atrial natriuretic/vasodilator
peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (SCIO:) SCIOS NOVA INC.
Lewicki JA, Scarborough RM;
WPI: 93-17525/21.
New polypeptide cpd. - useful as natriuretic, diuretic and/or
New polypeptide cpd. - useful as natriuretic, diuretic and/or
New polypeptide cpd. - useful as natriuretic, diuretic and/or
New polypeptide cpd. - useful as natriuretic, diuretic or sequences given in R40387-748 are atrial natriuretic,
The sequences given in R40387-748 are atrial natriuretic,
These production of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; pre-pro; atrial natriuretic/vasodilator peptide; ANVP; rat; regulation; fluid volume; blood pressure.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              vasodilator in mammals
Disclosure; Column 11: 45pp; English.
The sequences given in R36937-78 are atrial natriuretic/vasodilator peptide (ANVR) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also

vasodilator in mammals
Disclosure: Column 11, 45pp; English.
The sequences given in R36937-78 are atrial natriuretic/vasodilator
peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation
of filld volume and blood pressure in host organisms. These ANVP
fragments may be produced by solid-phase techniques. See also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure: Column 50: 45pp; English.

The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms.

These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptide cpd. - useful as natriuretic, diuretic and/or vascdilator in mammals
Disclosure: Column 50: 45pp; English.
The sequences given in R40387-748 are atrial natriuretic/
vascdilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See
New synthetic natriuretic peptide(s) - contg. 23 amino acid(s) and having eg diuretic, vaso-relaxant and antihypertensive activities.
                                                 Claim 5: Page 16: 16pp: English.

The peptide shows dissociation of diuretic and natriuretic effects from undesirable vasorelaxant effects on the heart rate, and duration of action is longer than for known natriuretic peptides. It is prepd. by solid phase synthesis. The C-terminal see also P71447.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; pre-pro; atrial natriuretic/vasodilator peptide; ANVP; rat; regulation; fluid volume; blood pressure.

Example: Page 15, 24pp; German.
P93041,P94848-P94853, P93098-P93100 are examples of the generic formula for peptides of the invention. They have diuretic, natriuretic and vasodilatory activity, and also immunomodulatory activity. They may also be used to treat renal insufficiency and to protect the kidneys against renal toxins, e.g. cyclosporin during kidney transplantation, and for treating glaucoma and/or reducing
                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                  are hypotensives and natriuretics.
Claim 1: page 32: 33pp; English.
Peptides can be used as a therapeutic drug for hypertension, a diuretic. for cardiac and cerebral circulatory diseases and as muscle relaxant.
                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The sequences given in R40387-748 are atrial natriuretic/

These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms.

These ANVP fragments may be produced by solid-phase techniques. See
Diuretic compsin. contg. atrial peptide -
in from for nasal admin. pref. in aq. soln.
Claim 1; Page 8; 10pp; English.
Derivatives of the diuretic peptide may have one or both C-terminal residues and up to four N-terminal residues absent.
